

How to update S160 firmware

1. Download the firmware via the link we provided. You will get a compressed file as shown below. (the file name may be different due to different firmware).

M462_4.4.4_201
51228_0151226
0_A006.rar

2. Unzip it, you will get a folder.

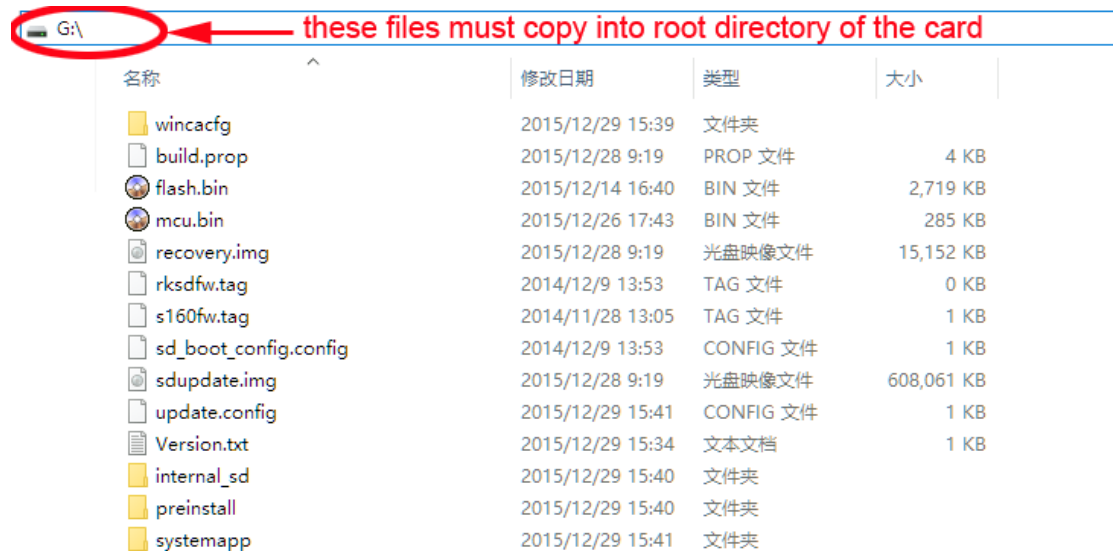

M462_4.4.4_201
51228_0151226
0_A006

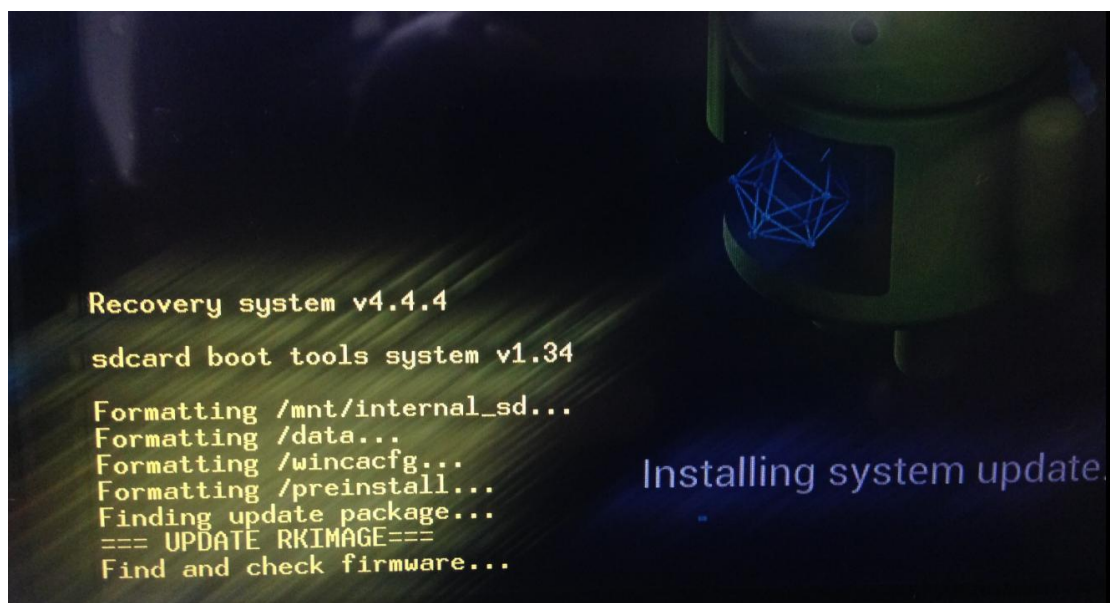

3. Open the folder and copy the files as shown below:

internal_sd	2015/12/29 15:40	文件夹	
preinstall	2015/12/29 15:40	文件夹	
systemapp	2015/12/29 15:41	文件夹	
wincacfg	2015/12/29 15:39	文件夹	
build.prop	2015/12/28 9:19	PROP 文件	4 KB
flash.bin	2015/12/14 16:40	BIN 文件	2,719 KB
mcu.bin	2015/12/26 17:43	BIN 文件	285 KB
recovery.img	2015/12/28 9:19	光盘映像文件	15,152 KB
rksdfw.tag	2014/12/9 13:53	TAG 文件	0 KB
s160fw.tag	2014/11/28 13:05	TAG 文件	1 KB
sd_boot_config.config	2014/12/9 13:53	CONFIG 文件	1 KB
sdupdate.img	2015/12/28 9:19	光盘映像文件	608,061 KB
update.config	2015/12/29 15:41	CONFIG 文件	1 KB
Version.txt	2015/12/29 15:34	文本文档	1 KB

4. Paste the files into ROOT DIRECTORY OF THE CARD(this is very important, if the files are not copied into root directory of the card, it causes upgrade failed.)

5. Insert the card into GPS/MAP card slot(**DO NOT INSERT THE CARD TO SD/DVD CARD SLOT**) and turn on the unit, it will update automatically(if it does not update and enters S160 android system directly, just turn off and turn on it again).

6. The system will update automatically, The screen maybe black

and alarm “bibi..”, this is normal, do not do anything.

7. When the screen displays “All complete successful! please remove the sdcard.....”, remove the card from slot, the system will restart automatically. DONE!
